Application/Control Number: 10/015,002

Art Unit: 2872

1. The amendment filed on April 28, 2005 has been approved and entered.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Ronit Gillon on May 18, 2005.

3. The application has been amended as follows:

Rewrite claims 5 and 6, as previously presented in the amendment filed on 18 April 2005, to read as follows:

- --5. (Currently Amended) A light beam receiver for a laser beam (2) of a laser positioning device comprising a plan reflection surface (3), wherein the plan reflection surface (3) comprises at least two reflector surfaces (4a, 4b) which are mirror-symmetrically arranged, wherein at least one reflector surface of said at least two reflector surfaces (4a, 4b) is inclined towards the laser beam (2) at an angle (α) of less than 45°, wherein the at least two reflector surfaces (4a, 4b) are reflecting lateral surfaces of a first reflector prism (5), wherein the first reflector prism (5a) forms a top edge (6a) along a first straight line (y), and wherein a second reflector prism (5b) forms a top edge (6b) along a second straight line (x) which intersects said first reflector prism (5a) at an angle of 90° at a midpoint (0).--
- --6. (Currently Amended) A light beam receiver for a laser beam (2) of a laser positioning device comprising a plan reflection surface (3), wherein the plan reflection surface (3) comprises at least two reflector surfaces (4a, 4b) which are mirror-symmetrically arranged, wherein at least

Application/Control Number: 10/015,002

Art Unit: 2872

one reflector surface of said at least two reflector surfaces (4a, 4b) is inclined towards the laser beam (2) at an angle (α) of less than 45°, wherein the at least two reflector surfaces (4a, 4b) are reflecting lateral surfaces of a reflector prism (5), wherein the reflector prism (5) forms one of a trilateral, quadrilateral, multilateral and round straight pyramid having a base surface on the plan reflection surface (3).--

4. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or fairly suggests a light beam receiver for a laser beam of a laser positioning device comprising a plan reflection surface, wherein the plan reflection surface comprises at least two reflector surfaces which are mirror-symmetrically arranged, wherein at least one reflector surface of said at least two reflector surfaces is inclined towards the laser beam at an angle ( $\alpha$ ) of less than  $45^{\circ}$ , wherein the at least two reflector surfaces are reflecting lateral surfaces of a reflector prism, wherein the light beam receiver includes the limitations and arrangement, as recited in claim 5, lines 6-10 or claim 6, lines 6-8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ricky D. Shafer whose telephone number is (571) 272-2320. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published
